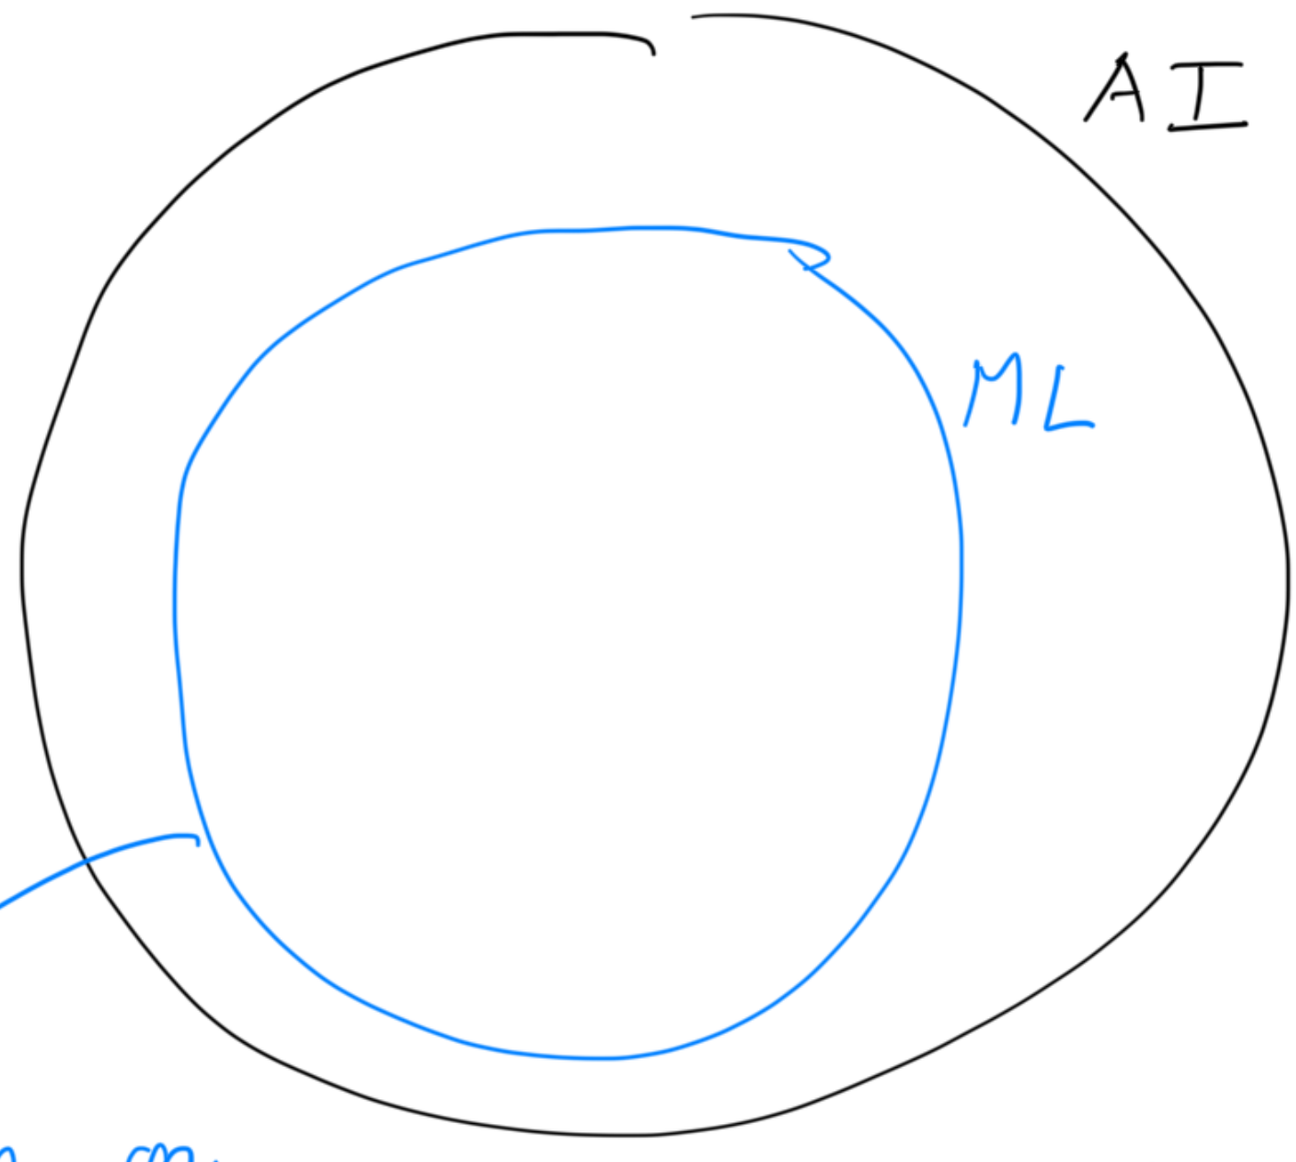
AI : artificial intelligence

1950



AI subset: focuses on

AI [illegible]

using historical data to understand trends and patterns, to make future predictions.

tax

↓

tax calculate

india winning prediction.

Supervised learning.

unsupervised

correct label

well defined goal.

→ find pattern in the data without a proper goal.

Supervised [label]

regression

classification

predict - discrete

set of categories

cat vs dog.

fraud cust vs non-fraud customer.

A, B, C, D, E, F grade.

sunny, rainy, cold.

cricket win prediction.

predict continuous values

student marks.

daily temperature.

cricket score prediction

features

what we want to use to make prediction.

[size, color, smell]

label → what we are trying to predict.

[sweet / non-sweet mango]

Gender	study-hours	attendance	assignment	# of comment	pass
